

# 51-1 Stud extractor with internal teeth

## "Economy" Ø 5 - 10 mm

### DESCRIPTION

The stud extractor with internal teeth of the 51 series is used for extracting stud bolts or broken components in automotive and industrial applications. Kukko stud extractors are available in various diameters and designs. The 51 series impresses with its handy and affordable design.

### RANGE OF APPLICATION

For unscrewing stud bolts or torn components

### BENEFIT

- Through the grooved knurled wheel, the stud bolt is securely pressed against the internal knurling.
- When unscrewing, the stud bolt is in the area of the key and cannot break off
- The extra profiled knurled wheel has a surface for a firm grip

### OPERATION

- Position the stud extractor on the stud bolt
- Drive the extractor using a torque wrench and securely remove the stud bolt with the knurled knob
