

# 112-125 Clamp with narrow, 45 degree angled jaw, max. 32 mm clamping range (Overall length 125 mm)

## DESCRIPTION

The clamping bars with a narrow, 45-degree angled jaw of the series 112-100 are used for clamping tyres of barrels, saw blades during sharpening, etc., in workshops, industry, and craft. The series 112-100 impresses with its application-oriented specialisation, ensuring optimal clamping.

## RANGE OF APPLICATION

For tensioning tyres of barrels, saw blades during sharpening, u

## BENEFIT

- Universal applicability in various work situations
- Very robust construction with flexible joint guidance
- Various designs allow application depending on the size of the workpiece

## OPERATION

- Position the hub vice by clamping the front and rear parts to the workpiece
