

YHU-S-Citaro Mobile hydraulic hub puller

"Citaro" with max. 30 t tension force

DESCRIPTION

The hydraulic hub puller "Citaro" is used for pulling off wheel hubs in the automotive field. It perfectly loosens very tight, difficult-to-remove wheel hubs. The 30 t pressure cylinder enables time-saving and universal application, even with stubborn parts.

RANGE OF APPLICATION

For removing wheel hubs in automotive.

BENEFIT

- For quick and easy positioning on the vehicle, the work unit is swiveling and presettable
- The lever operation allows ergonomic operability from the work area thanks to 360° swiveling
- The overload protection and the lowering control with an easily accessible rotary valve reduce the risk of injury
- Thanks to the 4 swivel castors and easy adjustability, it can be used anywhere at any time
- The flat design allows for working even on low-lying vehicles
